Revision History Log

Version	Creator	Issue Date	Changes
0.1	Nasr Eldin	11 Jan 2020	Initial draft

1. Introduction

1.1 Purpose

The Purpose of this document is to present Software requirements specifications for E-book service. This document is intended to be used as a reference during the development, implementation and testing of this Test case.

1.2 Definitions & Acronyms

Term\Acronym	Definition	
E-book	New test app allows getting a list of electronic books.	
MVP	A minimum viable product (MVP) is a development technique in which a new product or website is developed with enough features to satisfy early adopters.	

1.3 Use Cases and Stories Index

Sprint	Module	Use Case	Stories
Release 1			
Sprint 1			
		[UC-001] Books List	
		[UC-002] Book Details	

2. Project Overview

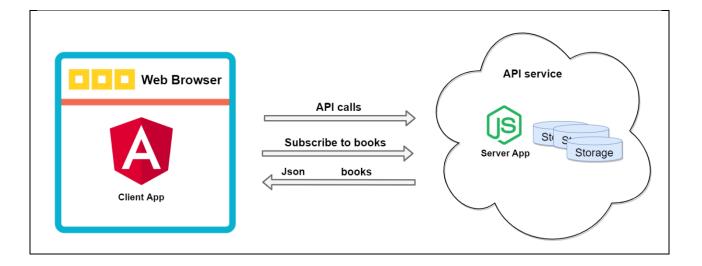

2.1 Business Objectives

We Need to investigate or list the top 10+ favorites book. So, we write an MVP test application to get a list of the book.

2.2 Scope of Work

Display books in the table UI and can search, filter, sort books with load more by scrolling. View book details in popup modal.

2.3 Product Perspective

2.4 Out of Scope

- Any services not mentioned within this document.

3. Actor Catalogue

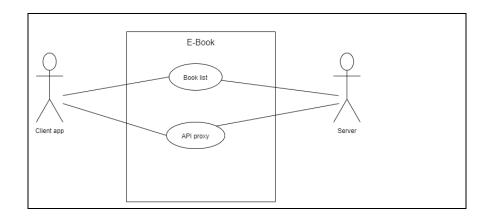

Ic	d Actor Name	Brief Description	Characteristics
1	Client app	Client app connect to eth network throw web3 to call smart contract and subscribe to events	System
2	Server	Server endpoint host for API service	System

4. Application Non-Functional Requirements

ID	Dependency					
1.	App should offer bullet-proof security mechanisms for access.					
2.	App should have great user-experience.					
3.	Asynchronous manner should be used for long-time processes.					
4.	Great user-experience					
	Ease of access					
	Simple & short steps to view books					
	Excellent performance					
	Totally secured and bullet-proof against security threats					
5.	Performance:					
	 Load app settings and proxy config within initialize app. 					
6.	Usability:					
	- App should support by Chrome.					
	- App should support auto responsive					

5. Application Functional Requirements

5.2 Use Cases

[UC-001] Books List

Use Case ID	UC-001			
Use Case Title	e Title Books List			
Description	This use case to explain how the app interacts with service to allowed			
	get k	et books data and display to the user as a list of favorite books.		
Primary Actor	Client app			
Secondary Actors	User			
Assumptions	- 9	Service return books		
Triggering Event	Load	books list in initialize app		
Pre-Condition(s)	-	App call backend service and return with books in json		
	-			
Post-Condition(s)	-	view of services details		
		map return values properties to book model		
Included Use Cases	N/A			
Extended Use Cases	N/A			
Related Business Use	N/A			
Case (BRS/BC)				
Related Non-	- App	ication Non-Functional Requirements

[UC-002] Book Details

[00-002] Book Details				
Use Case ID	UC-002			
Use Case Title Book Details				
Description	This use case to explain how to view/display book details.			
Primary Actor	Client app			
Secondary Actors	User			
Assumptions	- display book details			
Triggering Event	Load books list in initialize app			
Pre-Condition(s)	- App call backend service and return with book details in json			
	- Provide endpoint and provider API name			
Post-Condition(s)	- View of services details			
	- map return values properties to book model			
Included Use Cases	N/A			
Extended Use Cases	N/A
